<sup>3</sup> Departement of Industrial Engineering, King Saud University, Riyadh, Saudi Arabia

## ABSTRACT

**Background Problems:** Managing state budget deficits is crucial for fiscal sustainability, particularly in emerging economies like Indonesia. Despite existing fiscal policies, gaps remain in their implementation, compounded by issues like low tax compliance, inefficient spending, and external economic shocks. **Introduction/Main Objectives:** This study investigated the role of the state and citizens in managing the budget deficit, with a focus on Indonesia's fiscal policy and the importance of public engagement in addressing fiscal challenges. **Novelty:** This research introduces a novel approach by incorporating citizen participation into fiscal deficit management, an aspect often overlooked in traditional fiscal policy frameworks. It emphasizes the role of public involvement in enhancing fiscal discipline, transparency, and accountability. **Research Methods:** A systematic literature review (SLR) was employed to synthesize studies on fiscal policy, budget management, and public participation. The review identifies best practices from both domestic and international contexts for managing fiscal deficits. **Findings/Results:** Key strategies for managing Indonesia's budget deficit include enforcing balanced budget policies, controlling expenditures, and utilizing fiscal reserves. The study highlights the crucial role of citizens in supporting these strategies through engagement in policy discussions, oversight of public spending, and promoting tax compliance. **Conclusion:** The study concludes that sustainable fiscal management requires a combination of technical policy reforms and active citizen participation. Public involvement in fiscal governance can improve transparency and enhance the effectiveness of deficit management, fostering long-term economic stability.

## 1. Introduction

The State Budget (Anggaran Pendapatan dan Belanja Negara, APBN) is a cornerstone of Indonesia's economic governance, shaping how public revenues and expenditures are allocated to meet the nation's development objectives. Achieving fiscal stability within the APBN framework is an ongoing challenge, particularly when expenditures exceed revenues, leading to a budget deficit. Such deficits, if not managed properly, can result in increased borrowing, escalating interest burdens, inflationary pressures, and a diminished ability to fund essential public services (Istiqomah & Mafruhah, 2022).

Indonesia has encountered significant fiscal pressures in recent years, particularly in the wake of the COVID-19 pandemic. In 2020, the fiscal deficit surged to IDR 947.7 trillion (6.14% of GDP), reaching its peak as the government responded to the pandemic with substantial public spending. However, since then, the deficit has gradually decreased, falling to 2.29% of GDP in 2024, signaling partial recovery and efforts toward fiscal consolidation. While this decline represents progress, the improvement does not mask underlying structural issues, including low tax compliance, a narrowing revenue base, and escalating subsidies (Ajmal, Khan, & Shad, 2021). Furthermore, external shocks, such as global market instability, fluctuating commodity prices, and climate-related disasters, exacerbate these challenges, creating a gap between ideal fiscal sustainability (*das sollen*) and the reality of Indonesia's fiscal situation (*das sein*) (Sardoni, 2024).

Although the fiscal deficit has shown a trend of narrowing recently, it remains a significant concern. The Indonesian government continues to face challenges in balancing its budget, and the structural issues persist despite recent improvements. These persistent fiscal issues underline the need for comprehensive policy strategies to address the nation's long-term fiscal sustainability (Indah Dwi Agustin, 2025).

Although the current literature provides comprehensive analyses of fiscal deficit management, numerous studies predominantly concentrate on macroeconomic models or singular fiscal instruments, frequently overlooking a holistic approach that incorporates societal engagement and context-specific challenges. Countries like Tanzania and Uzbekistan have presented inclusive fiscal frameworks emphasizing domestic financing and civic engagement (Amoatey & Hayibor, 2017), but such models remain underexplored within the Indonesian context.

This study seeks to fill that gap by systematically reviewing literature on fiscal deficit management with a dual focus: identifying cross-country best practices that can be adapted to Indonesia's fiscal structure and analyzing the role of citizen participation in enhancing fiscal discipline. The innovation of this research lies in synthesizing fiscal policy tools with civic engagement strategies,

a perspective that has been underrepresented in Indonesian public finance research. This research diverges from prior studies that predominantly focus on technocratic solutions; it incorporates both policy-driven and participatory methodologies to foster long-term fiscal sustainability (Alshaib et al., 2023).

By employing the Systematic Literature Review (SLR) method, this study provides a comprehensive examination of existing scholarly work, identifies prevailing trends, exposes inconsistencies, and offers actionable recommendations (Hijriyah, Alias, & Mohd Sahabuddin, 2024). The results aim to assist policymakers in crafting holistic fiscal strategies, reducing dependence on external debt, and enhancing public participation in budgeting processes. Ultimately, this research seeks to enhance the ongoing dialogue regarding sustainable fiscal governance in emerging economies, providing insights based on empirical evidence specifically adapted to Indonesia's distinctive fiscal context.

## 2. Literature Review

Fiscal deficit management can be classified into two main perspectives: macroeconomic tools and participatory governance. The macroeconomic perspective focuses on technical and policy-driven solutions, such as fiscal rules, tax reforms, and expenditure control. According to this view, deficits are managed through economic levers that directly influence government revenues and expenditures (Egan & Bergin, 2023). On the other hand, the participatory governance perspective emphasizes the role of citizens in managing fiscal deficits by enhancing fiscal literacy, ensuring transparency, and holding the government accountable for its financial decisions (Karatzimas, 2020).

A fiscal deficit occurs when a government's expenditures exceed its revenues, requiring the government to borrow or issue debt to cover the gap. The consequences of persistent fiscal deficits include rising public debt, inflationary pressures, and reduced government capacity to fund public services (al-Rubaie & Ahmed, 2023). Effective deficit management involves a combination of technical tools, such as tax reform, expenditure control, and prudent debt management, along with active citizen participation in fiscal governance to ensure long-term fiscal sustainability (Anus, Marc, & Ali, 2025).

Recent studies highlight the multidimensional nature of fiscal deficit management. It is not only a matter of applying financial policies but also requires strong governance structures that involve citizens. Studies by Mærøe, Norta, Tsap, & Pappel (2021) emphasize that citizen participation, through initiatives like participatory budgeting, enhances the transparency and accountability of fiscal processes. Furthermore, Wobst, Tanikulova, & Lueg (2025) suggest that leadership commitment to

fiscal discipline and value-based governance are pivotal in shaping fiscal outcomes at the organizational level.

However, a notable gap exists in integrating human resource management (HRM) practices into fiscal deficit management. While much of the existing research focuses on macroeconomic policy or behavioral ethics, there is limited exploration of how HRM functions, such as recruitment, training, performance evaluation, and reward systems, can operationalize participatory governance and contribute to fiscal discipline (Reina & Scarozza, 2021). This study aims to fill this gap by proposing a framework that positions HRM practices as key enablers of fiscal integrity. By integrating insights from leadership, organizational culture, and fiscal governance, this framework provides a holistic approach to managing fiscal deficits that incorporates both technical policy tools and citizen engagement.

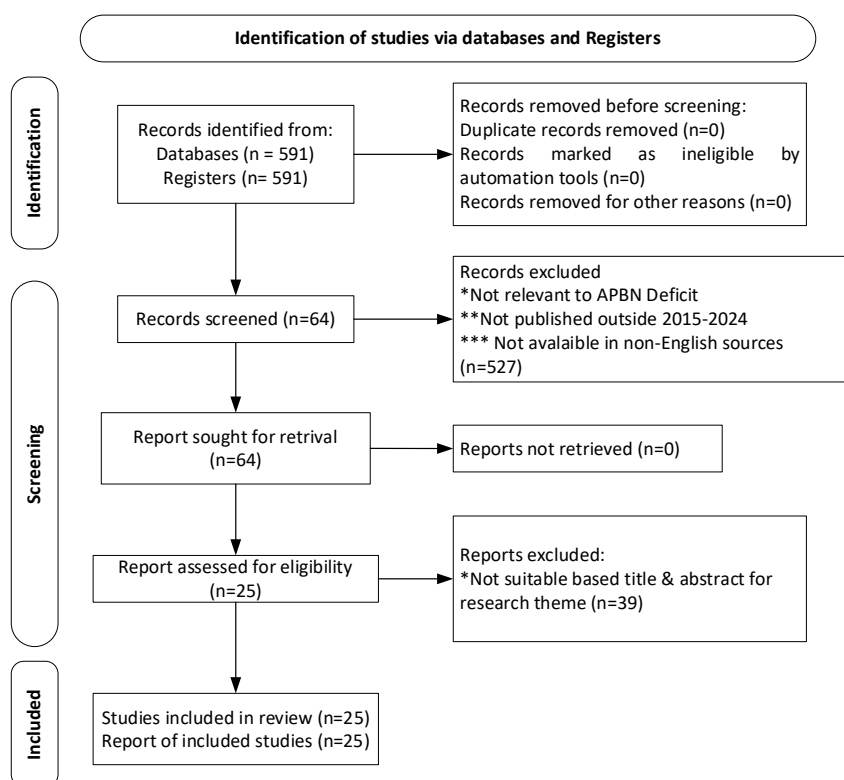

### 3. Method, Data, and Analysis

This study employs a systematic literature review (SLR) approach to explore strategies for managing Indonesia's State Budget Deficit (APBN) and the roles of both the state and citizens in addressing fiscal challenges. The SLR method was selected for its systematic capacity to identify, assess, and integrate pertinent studies, thereby offering a robust empirical basis for developing evidence-based fiscal policy recommendations (Snyder, 2019).

#### **Data Sources and Search Strategy**

The literature search was conducted between March 1, 2025, and April 1, 2025, using academic databases such as Google Scholar, Scopus, and JSTOR. The search string used was “state budget deficit” OR “fiscal management” OR “national budget strategy” AND “Indonesia” OR “emerging economies” AND “fiscal policy” OR “budget strategy”. Only peer-reviewed journal articles published between 2015 and 2024 were considered. Articles not relevant to budget deficit management in Indonesia, or those not available in full-text format, were excluded (Yasin et al., 2020). Obscure literature and non-English sources were not included unless published in peer-reviewed journals. While this number may suffice for a focused thematic synthesis, expanding the scope to at least 25 studies by incorporating additional databases such as ScienceDirect, Emerald Insight, or Wiley Online would enhance the representativeness and empirical robustness of the findings, ensuring a more comprehensive and diverse perspective on the topic. From the initial set of 116 articles, 25 relevant studies were selected after duplicates and irrelevant records were removed, with the article selection process visualized using a PRISMA flow diagram. The search process followed the PRISMA 2020 guidelines, which include identification, screening, eligibility, and inclusion steps (Page, McKenzie, Bossuyt, Boutron, Hoffmann,

Mulrow, Shamseer, Tetzlaff, Akl, et al., 2021). A PRISMA flow diagram illustrating this process is included in Figure 1.

**Figure 1.** PRISMA 2020 flow diagram

**Source:** (Ramasamy, 2022)

### ***Inclusion and Exclusion Criteria***

Inclusion and exclusion criteria were established following the PRISMA protocol for systematic literature reviews, as shown in Figure 1. Studies were included if they were peer-reviewed journal articles, focused on the management of APBN deficits and fiscal strategies, and provided full-text access. Articles were excluded if they were not directly relevant to the APBN context, were not available in full-text format, lacked sufficient methodological rigor, or did not meet academic writing standards. Obscure literature, non-English sources, and studies with insufficient data were also excluded unless published in peer-reviewed journals (Page, McKenzie, Bossuyt, Boutron, Hoffmann, Mulrow, Shamseer, Tetzlaff, & Moher, 2021).

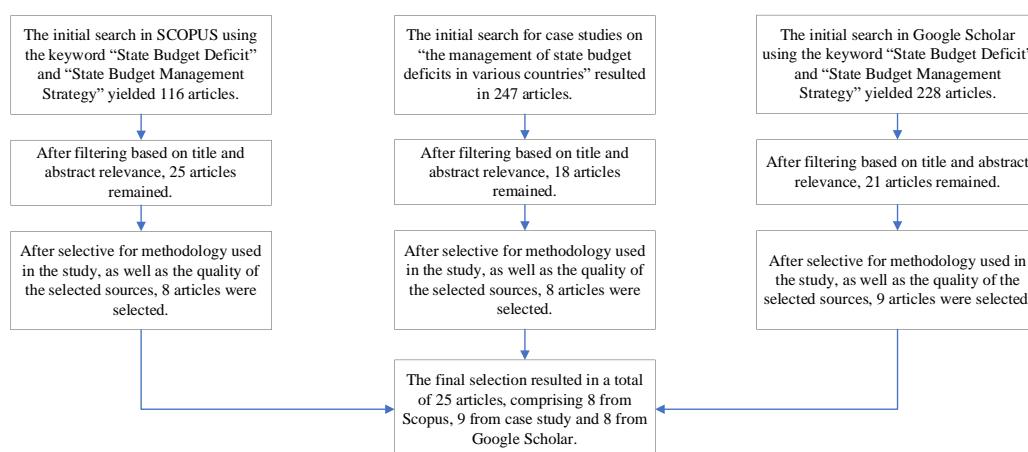

### ***Selection and Analysis Process***

Following the PRISMA guidelines, studies were included if they were peer-reviewed, focused on fiscal deficit management in Indonesia, and provided full-text access. Exclusion criteria involved studies not directly relevant to the APBN context, lacking methodological rigor, or published in non-peer-reviewed sources. Each study was assessed for its methodological design and geographic distribution. The article selection process began with an initial set of 116 articles. These articles were first screened to remove

duplicates and irrelevant records, leaving 25 studies for further in-depth review. The selection process was visualized using the PRISMA flow diagram to ensure transparency and reproducibility, capturing each stage of the review (Identification, Screening, Eligibility, and Inclusion) (Tugwell & Tovey, 2021). The studies were then analysed using thematic synthesis, a method that allows for the integration of findings across studies. The analysis identified key policy strategies, patterns, and best practices in managing fiscal deficits. Thematic categories included fiscal policy, citizen participation, and strategies for sustainable fiscal management. Each study was evaluated for its methodological design, with specific attention to whether the research was qualitative, quantitative, or mixed-methods, as well as its geographic distribution. This approach followed the PRISMA protocol, ensuring that the review was conducted in a rigorous, systematic manner, with the entire process being documented and transparent for future replication (Sarkis-Onofre, Catalá-López, Aromataris, & Lockwood, 2021).

### Data Analysis

Data analysis involved categorizing the studies into thematic areas, synthesizing the key findings, and developing policy recommendations aimed at enhancing citizen participation and promoting sustainable fiscal policies (Waddington et al., 2019). The screening and selection process is outlined in the accompanying Figure 2. The 25 previously selected articles were re-filtered, considering the suitability of the title and abstract to the research theme. This process resulted in a final analysis of 18 articles.

**Figure 2.** Article Selection and Screening Flowchart

**Source:** (Kristianto & Setyorini, 2024)

## 4. Result and Discussion

Based on a systematic literature review (SLR), 25 relevant scholarly articles were identified, comprising 8 articles from Scopus, 8 articles from the Case Study stream, and 9 articles from Google Scholar. These 25 selected articles successfully passed the initial screening process and were deemed

to meet the relevance criteria for further detailed analysis. These sources were selected through Scopus and Google Scholar databases, with the results presented in Tables 1, 2 and 3, respectively.

**Table 1.** Scopus Article Selection Results

No	Author & Year	Methodological Design	Geographic Distribution	Key Findings	Role in Managing the State Budget Deficit	Citizens' Role in Supporting Policies
1	(Kim & Park, 2022) State and Local Government Review	Qualitative	United States	Balanced Budget Requirements (BBR) reduce state expenditures, with technical rules more effective than political ones.	BBR mandates, such as restrictions on spending and deficit carry-overs, effectively curb waste and maintain fiscal discipline.	Citizens support balanced budgets by electing leaders committed to fiscal discipline, enhancing transparency, ensuring tax compliance, and monitoring government spending.
2	(Park & Kim, 2022) Economic and Political	Quantitative	United States	Spending stabilization rules help mitigate budget instability by maintaining stable expenditures and building rainy-day funds during surpluses.	Stabilization rules and rainy-day funds prevent severe cuts during recessions, supporting long-term fiscal sustainability.	Citizens engage in political processes, promote transparency, and support measures like rainy-day funds and policies to stabilize government expenditures.
3	(Lu & Willoughby, 2015) International Journal of Public Administration	Quantitative	United States	Performance measurement enhances budget management and transparency, even though it has only a limited direct effect on cost reduction.	Performance measurement supports resource allocation and long-term budget planning, enhancing transparency and accountability.	Citizens advocate for performance measurement systems, pushing for transparency, accountability, and more efficient government spending.

				while their impact weakens at higher quantiles. In non-welfare countries, budget deficits consistently hinder growth. Strong governance improves growth in both groups but may slow it at higher quantiles due to a focus on wealth redistribution and environmental issues.	growth, whereas in non-welfare countries, they tend to impede growth. Additionally, the quality of governance plays a crucial role in moderating this relationship.	funds, and enhanced growth. However, in non-welfare countries, weak governance hampers the effective use of budget deficits, making it harder to stimulate growth. The study implies that improvements in governance quality can help non-welfare countries better manage budget deficits and foster economic growth.
7	(Abbasova, İsmayilov, & Trusova, 2023) Scientific Bulletin of Mukachevo State University Series "Economics"	Quantitative	Ukraine	The agricultural sector has become a significant source of budget revenue for Ukraine, with surplus revenues over expenditures. However, state support for the sector has been declining, and international aid has become a	The agricultural sector plays a vital role in replenishing the state budget, particularly when other sectors face difficulties due to the war. However, the study suggests that market instruments like bonds are not the best long-term solution for financing the budget deficit, given the growing public debt.	The agricultural sector's contributions to the budget, through taxes and job creation, are essential for Ukraine's financial stability. The study underscores the importance of supporting this sector with both financial and non-financial measures to ensure sustainable growth and reduce its reliance on external debt.

No	Author & Year	Methodological Design	Geographic Distribution	Key Findings	Role in Managing the State Budget Deficit	Citizens' Role in Supporting Policies
8	(Irwin, 2016) A Collection of Reviews on Savings and Wealth Accumulation	Quantitative	United States and European	crucial component of the country's budget during wartime. Governments differ in how they define and measure debt and deficits, with some using cash accounting while others adopt accrual accounting, which provides a more comprehensive view of government finances. However, fiscal rules can sometimes lead to manipulation of fiscal data through off-balance-sheet transactions or creative accounting methods.	The paper highlights how fiscal rules can constrain government borrowing but may encourage governments to shift debt and deficit outside the official budget through creative accounting. This has significant implications for accurately managing state budget deficits.	The study suggests that budgetary transparency is critical, as greater transparency can reduce the likelihood of governments engaging in fiscal manipulation. Citizens play a crucial role by demanding transparency, which in turn discourages the use of off-balance-sheet maneuvers to circumvent fiscal rules.

The choice between tax-based or spending-based adjustments depends on the trade-offs between immediate fiscal relief and long-term economic stability.	consumption patterns and the labor market. For instance, tax increases affect disposable income and consumption, while spending cuts impact public services. The study suggests that a balanced approach that minimizes the negative effects on citizens' welfare is crucial for sustainable fiscal consolidation.

**Source:** Google Scholar data that has been processed from Google Scholar articles

A review of 16 selected articles (8 Scopus-indexed and 8 from Google Scholar) concerning the national budget deficit (APBN) identified ten key fiscal strategies applicable to the Indonesian context:

1. Mandating a Balanced Budget

The government can require a balanced budget as a fundamental rule in preparing the national budget, ensuring that expenditures align with national revenue, and preventing a continuous deficit (Kim & Park, 2022).

2. Expenditure Control and Additional Expense Management

Strict rules should be established to limit additional spending beyond the approved budget, ensuring financial discipline and preventing wastage (Ermasova & Mikesell, 2019).

3. Prohibiting Carry-Over Deficits

Regulations should be introduced to prevent deficits from being carried over to the following fiscal year, forcing the government to resolve deficit issues within the current year and avoid continuous debt accumulation (Speian, 2022).

4. Utilizing the Rainy-Day Fund

The government can establish and utilize a rainy-day fund to address deficits during recessions or crises, helping to stabilize the budget without the need for drastic public spending cuts (Shi, 2016).

5. Implementing Expenditure Stabilization Rules

The government should adopt stabilization rules to ensure that public spending remains stable despite fluctuations in national income, maintaining economic balance (Lu & Willoughby, 2015).

6. Managing Surplus Revenue

In cases of revenue surplus, funds should be allocated to increase reserves or one-time projects, avoiding long-term dependency on often inaccurate revenue projections (Irwin, 2016).

7. Raising Taxes

Tax increases, such as on income or sales, may be implemented to boost government revenue and cover the deficit. However, such measures must consider their impact on the public, especially low-income groups (Abbasova et al., 2023).

8. Prudent Debt Management

Managing national debt wisely is crucial to addressing the deficit without adding long-term fiscal burdens. Debt should be limited to funding productive investments that support economic growth, rather than for operational expenses (Speian, 2022).

9. Budget Structure Reform

The government should reform the budget structure to improve efficiency and maximize existing resources. This reform should focus on eliminating inefficient expenditures and directing funds more strategically (Van & Sudhipongpracha, 2015).

These strategies provide a comprehensive approach to managing the APBN deficit and ensuring long-term fiscal sustainability. By implementing these measures, the government can maintain fiscal balance and support economic growth. However, successful management relies on active citizen participation. The next step is reviewing journals on the role of citizens in supporting government policies addressing the APBN deficit. This review will help define how citizens can contribute and how to effectively communicate strategies for managing the deficit (Muslim, Bata Ilyas, & Sani, 2024). The

following outlines the role of citizens in supporting government efforts.

1. Mandating a Balanced Budget

Citizen's Role:

- Support the balanced budget policy by participating in elections and voting for leaders committed to fiscal discipline.
- Engage in political processes such as public discussions and consultation forums to support responsible fiscal decision-making (Ermasova & Mikesell, 2019).

2. Expenditure Control and Additional Expenditure Management

Citizen's Role:

- Monitor government expenditures by utilizing democratic rights through media and civil society organizations.
- Support fiscal reform policies that emphasize efficiency and the elimination of wasteful government spending (Abbasova et al., 2023).

3. Utilizing the Rainy-Day Fund

Citizen's Role:

- Increase awareness about public debt management and support policies that ensure annual deficit management without accumulation.
- Reduce reliance on debt by participating in discussions about alternative fiscal policies (Ermasova & Mikesell, 2019).

4. Utilizing the Rainy-Day Fund

Citizen's Role:

- Raise awareness about the rainy-day fund and advocate for transparency in its use during crises.
- Support the creation and management of emergency funds, recognizing their strategic role in stabilizing the budget (Shi, 2016).

5. Implementing Expenditure Stabilization Rules

Citizen's Role:

- Maintain fiscal discipline by supporting data-driven expenditure rules and controls to prevent dependence on economic fluctuations.
- Support stable budget management policies and contribute feedback in public policy forums (Van & Sudhipongpracha, 2015).

6. Managing Surplus Revenue

Citizen's Role:

- Advocate for the use of surpluses for one-time projects, rather than long-term programs, to avoid creating structural dependency.
- Support the allocation of funds based on performance results, rather than political promises (Lu & Willoughby, 2015).

#### 7. Adopting Fiscal Austerity Measures

##### Citizen's Role:

- Support strategic expenditure cuts, including public service efficiency improvements.
- Participate in national austerity programs, such as reducing misguided subsidies (Shi, 2016).

#### 8. Raising Taxes

##### Citizen's Role:

- Increase tax compliance by ensuring timely reporting and payment of taxes.
- Comply with tax increase policies and support fiscal education on the importance of taxes for the sustainability of national programs (Yu, Zhou, Jiang, & Liu, 2025).

#### 9. Prudent Debt Management

##### Citizen's Role:

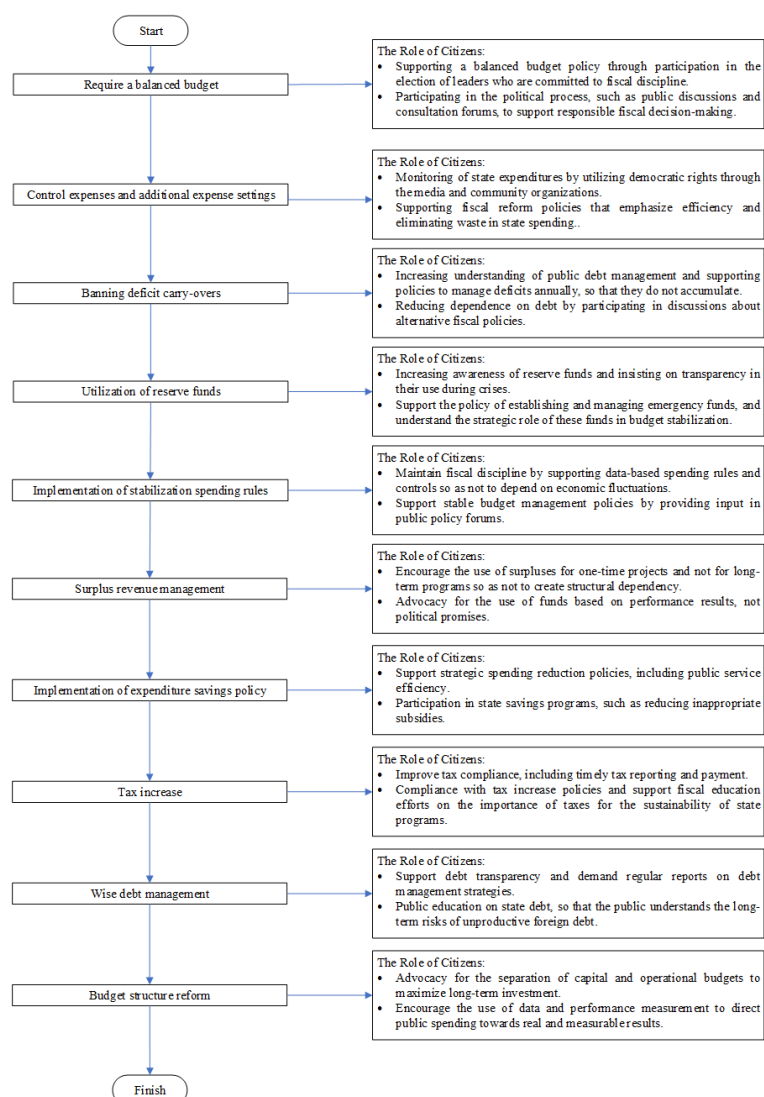

- Support debt transparency and demand regular reports on debt management strategies.
- Educate the public on the long-term risks associated with non-productive foreign debt (Speian, 2022).

#### 10. Reforming the Budget Structure

##### Citizen's Role:

- Advocate for the separation of capital and operational budgets to maximize long-term investment.
- Encourage the use of data and performance metrics to direct public expenditure toward measurable and tangible results (Shi, 2016).

**Figure 3.** Government Policies and Citizens' Roles in Addressing State Budget Deficits

**Source:** Data that has been processed from Scopus and Google Scholar articles

In conclusion, this study underscores that effective management of the APBN deficit requires more than technical fiscal policies, it must be supported by active public participation. Strategic measures such as expenditure control, tax optimization, and prudent debt management are more impactful when coupled with citizen engagement in governance processes. To build long-term economic resilience, it is important to improve fiscal literacy, make budgets more open, and get more people involved in civic life. (Idrus, 2024).

This study's findings suggest that managing the state budget deficit requires a multi-faceted approach. While fiscal strategies such as expenditure control, tax optimization, and prudent debt management are essential for deficit reduction, successful implementation also hinges on active citizen participation. As evidenced by various studies, the role of citizens in fiscal governance, ranging from supporting balanced budget policies to monitoring government expenditure and tax compliance,

cannot be overstated (Abbasova et al., 2023). This perspective is further reinforced by comparative evidence presented in Table 3, which outlines case study articles from various countries.

**Table 3.** Selection Results of Case Study Articles on Strategies for Managing State Budget Deficits in Various Countries

No	Author & Year	Methodological Design	Fiscal Deficit Management Strategies Across Countries
1	(Zaynalov & Fattoev, 2024) International Journal for Gospodarka i Innowacje	Quantitative	Uzbekistan Relies on external borrowing for over half of its deficit, with risks of foreign currency debt and inflation. Recommends increasing domestic bond use and improving tax efficiency to reduce long-term fiscal imbalances.
2	(Syamsurijal, Sugandi, Sumaryana, & Ismanto, 2023) Bulletin of Monetary Economics and Banking	Mixed-Methods	Indonesia Uses automatic stabilizers and discretionary policies, particularly income and consumption taxes. The country suggests flexible fiscal rules and a strong legal framework to enhance crisis response and recovery, particularly during economic downturns like COVID-19.
3	(Okah, Chukwu, & Ananwude, 2019) Asian Journal Economics, Business and Accounting	Quantitative	Nigeria Focuses on debt financing and capital expenditure to foster growth. The report recommends directing deficit financing towards productive investments and strengthening domestic revenue sources to improve debt sustainability.
4	(Nguyen & Darsono, 2022) Journal of Accounting and Investment	Quantitative	ASEAN countries It was discovered that while fiscal deficits financed large-scale projects, they also led to imbalances in the 1980s and 1990s. The report recommends increasing domestic savings and implementing fiscal adjustments like spending cuts and currency devaluation to stabilize economies.
5	(Kisava & Myovella, 2018) Pressacademia	Mixed-Methods	Tanzania Persistent deficits led to high inflation, particularly when financed by money creation. The report advocates for avoiding monetization, boosting output (especially agriculture), and improving debt management for fiscal sustainability.
6	(Bui, 2018) Eurasian Economic Review	Quantitative	United States Rising deficits lower national savings, raise interest rates, and crowd out private investment. The need for sound fiscal policies to manage deficits and mitigate long-term inflation risks is emphasized.
7	(Kurantin, 2017) European Scientific Journal	Quantitative	Ghana Persistent deficits, mainly financed by external borrowing, hinder economic growth by reducing private investment. The report suggests fiscal reforms such as broadening the tax base, reducing unproductive

No	Author & Year	Methodological Design	Fiscal Deficit Management Strategies Across Countries
8	(Emineri, 2015) The 2015 WEI International Academic Conference Proceedings Viena, Australia	Quantitative	spending, and focusing on sustainable debt management to ensure long-term stability. North Cyprus The study discusses the differences between developing and developed countries in fiscal policy strategies. Developing countries tend to use expansionary fiscal policies, often leading to higher budget deficits. In contrast, developed countries focus on low inflation policies. The impact of budget deficits on economic growth varies, with productive government spending leading to positive outcomes and non-productive spending causing negative effects on economic growth.
9	(Akgay, Alper, & Ozmucur, 2018) Inflation and disinflation in Turkey	Quantitative	Turkey The study notes that fiscal policies vary across countries, especially between developing and developed nations. Developing countries often opt for expansionary fiscal policies, which increase budget deficits, while developed countries tend to prioritize low inflation. The sustainability of fiscal policies depends on the ability to manage deficits, and the study highlights that in Turkey, a balance of fiscal austerity and investment is crucial to avoid inflationary risks.

### ***Fiscal Strategy and Public Participation***

Integrating citizens into fiscal management is a new and important aspect of Indonesia's deficit reduction strategy. Implementing a balanced budget, for example, requires not only government commitment but also citizen involvement in the electoral process and public policy forums, where they can hold leaders accountable. Similarly, controlling expenditures and managing discretionary spending becomes more effective when citizens engage with the media and civil society organizations to monitor government spending (Musa et al., 2023).

The concept of utilizing the rainy-day fund is particularly relevant in this context, as it emphasizes the importance of fiscal transparency. Citizens need to understand and advocate for the strategic use of these funds, especially during crises, to prevent unsustainable debt accumulation (Shi, 2016).

The framework developed in this study illustrates the interaction between fiscal policy tools (e.g., expenditure control, tax reforms) and citizen engagement (e.g., tax compliance, policy advocacy, budget transparency). These elements work together to enhance fiscal discipline and reduce budget deficits. Citizen engagement not only ensures the effective implementation of fiscal policies but also promotes transparency and accountability, ultimately contributing to long-term fiscal sustainability.

This model, tailored for Indonesia's context, underscores the need for a dual approach combining both technical policy reforms and active public participation (Arif & Arif, 2023).

#### ***Prudent Debt Management and Fiscal Austerity***

The study also highlights the importance of prudent debt management. In Indonesia's case, prudent debt policies should focus on financing investments that contribute to long-term economic growth, not just operational costs. This aligns with findings from Speian (2022), who stated that public education on debt risks is essential for improving citizen understanding of fiscal policy.

Fiscal austerity measures also play a role in this context, as reducing non-productive expenditures and encouraging public participation in austerity programs can lead to more sustainable fiscal policies. The integration of performance-based budgeting, as suggested by Lu & Willoughby (2015), further complements these efforts by ensuring that resources are allocated efficiently.

#### ***Comparative Analysis with International Practices***

In comparing Indonesia's fiscal strategies to those of other countries, we observe several points of divergence and convergence. Countries like Uzbekistan and Tanzania, for example, have adopted strategies focusing on the domestic debt market to reduce dependence on foreign borrowing, whereas Indonesia's strategy emphasizes the role of public participation in budgeting and fiscal decision-making (Zaynalov & Fattoev, 2024). Indonesia's emphasis on public participation and budget transparency aligns with best practices observed in Malaysia and Thailand, where public engagement in the budgeting process has improved fiscal management following economic crises (Kim & Park, 2022). In contrast, countries like Nigeria and Ghana still face challenges related to political spending, which crowds out productive investments (Kilimani et al., 2015).

#### ***Policy Implications and Recommendations***

The study suggests several improvements for Indonesia's fiscal strategy, including strengthening legal frameworks for automatic fiscal stabilizers, expanding the domestic bond market and reducing reliance on foreign loans, increasing fiscal literacy to improve public accountability and engagement, and redirecting government spending toward productive sectors to stimulate economic growth. These findings are consistent with the economic theories on deficit financing and fiscal sustainability and contribute to the broader discourse on integrating citizen participation with fiscal governance (Mawejje & Odhiambo, 2020).

While this study synthesizes global best practices, it limits the generalizability of these findings to Indonesia's unique fiscal landscape. Several biases may influence the results, such as the exclusion of grey literature and non-English sources, which could limit the diversity of perspectives. Additionally, heterogeneity exists in fiscal policies and economic contexts across countries, which could influence

the applicability of certain strategies. For instance, while participatory governance may be effective in European contexts, it may face challenges in Indonesia due to differing political dynamics and governance structures. Therefore, while the review provides useful insights, these findings should be adapted to the Indonesian context, considering local economic, political, and cultural factors (Hartling et al., 2017).

## **5. Conclusion and Suggestion**

Managing a state budget deficit is a critical task for ensuring fiscal stability and long-term economic sustainability, especially in emerging economies like Indonesia. According to the 2023 Corruption Perceptions Index (CPI), regions such as Western Europe and the European Union scored an average of 65 out of 100, making them the least corrupt globally. In contrast, sub-Saharan Africa scored the lowest with 33, highlighting the disparity in corruption levels across regions. Effective deficit management, combined with robust anti-corruption measures, is essential for economic growth and institutional integrity. Integrating effective fiscal strategies with public involvement can lead to a more resilient and sustainable fiscal framework.

This study concludes that managing Indonesia's state budget deficit (APBN) requires more than just technical fiscal strategies. It emphasizes the importance of public participation in governance, where active citizen engagement in fiscal processes and monitoring plays a pivotal role in fiscal discipline. The research highlights that fiscal policies such as expenditure control, tax reforms, and prudent debt management, when coupled with citizen participation, are essential for achieving fiscal sustainability.

From a theoretical perspective, the study will clarify the importance of integrating citizens into fiscal governance frameworks. Practically, the findings suggest that policymakers should focus on strengthening the legal framework for fiscal management, improving tax compliance, and expanding domestic financing mechanisms to reduce dependency on foreign debt.

However, the study's reliance on secondary data limits its scope. Future research should utilize empirical methods such as surveys or case studies to evaluate the direct influence of citizen participation on fiscal outcomes. Additionally, comparative studies across different countries could provide helpful information about how varying institutional contexts influence the effectiveness of public involvement in fiscal management strategies.

## **Acknowledgement**

The authors would like to express gratitude to the Polytechnic of Furniture and Wood Processing Industry for its support and assistance in conducting this research.
